What is data engineering?

• A person that:

- **Gathers** everything up: Grabs all the toys (information) from the floor, closet and under the bed.
- **Cleans it** up: Throws away the old socks & leaves only the clean, good pieces are left.
- **Organizes it**: They put all the red LEGO bricks in one bucket, blue in another, and wheels in a special tray.
- **Puts it on a shelf**: Line up the buckets nicely on a sturdy shelf so they are easy to reach.

Without a data engineer; the toys (info) are just a giant, messy pile that nobody can use.

If a company doesn't have data engineers 2 bad things happen:

(a) Big brains get stuck in the mud.

(b) Computers make bad guesses.
