

The Golden Rule:

Good data story doesn't just say "what" happened. It explains:
 - Why it happened & tells listeners what action should be taken next.

• Basically, we are using data to solve a mystery & telling the world how the case was cracked.

Data Process

Datawarehouse

Relational database

- Stores structured data that can be related or joined together to become 1
- In a relational database, we store structured data that can be connected to one another using

primary key & foreign key
 (Dimension tables & fact keys)

Primary key - Dim table

Customer ID	Name	Age	City
1	Rhafi	28	NY
2	Jeff	22	LA
3	Mark	18	MG

Primary key - Dim table

Product ID	Product category	Product name
101	fruit	Banana
102	fruit	Apple
103	electronic	Laptop
104	Clothing	UZZI

- Dimension tables hold words & descriptions rather than numbers you add together.

- Fact tables hold numbers you add together.
