

- Does not consistently change

Primary Key: Unique identifier that differentiates each component from the table

Example: ID number

transactions

order-ID	Cust-ID	Prod-ID	Rev
324	2	104	70
333	1	102	80
401	3	101	100

Fact table

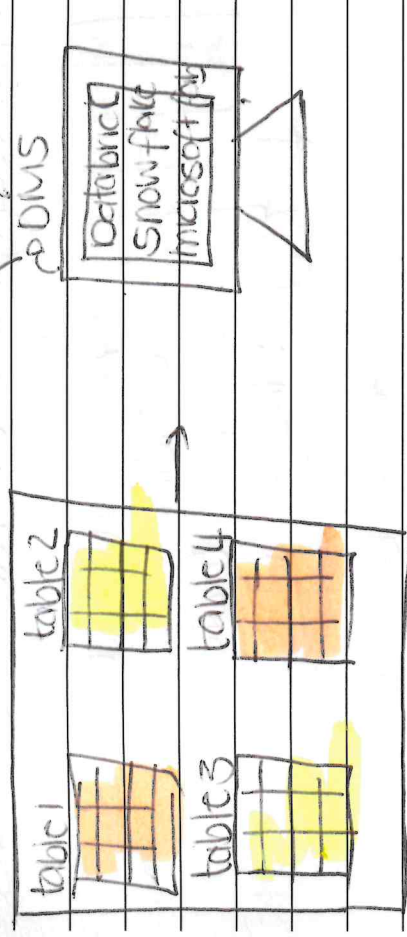

- Has foreign ~~tables~~ keys
- Contains numbers
- Used for analysis
- Has different IDs from different tables

Foreign Table: Primary key in one table that is found in another table

Dataware House

We use DMS to access data

Connect to our data

• In a DMS we code

Why do we need to code?!

• Data Inspection / exploration

↳ To see what data is available

• Data exploratory Analysis

↳ To understand the relationship between our data points

We code to retrieve, amend, update,

manipulate, clean, aggregate, join, delete

With the goal of ~~pre~~ extracting valuable & actionable insights.

• Feature building used in creating features used in ML for predictions
