## 9 June 2026 : Data Filtering

- ↳ The process of narrowing down your query results so that you get the specific rows you actually care about.
- ↳ Instead of pulling an entire table with millions of rows, you use filters to slice and dice the data based on specific conditions
- ↳ A way to exclude rows of data that do not meet a specific criteria

→ We filter based on conditions.

The core: The **WHERE** clause

- It is like a giant magnifying glass that helps you find exactly what you are looking for.

-- **WHERE** is a rule to say:

"ONLY SHOW ME THE THINGS THAT

MATCH MY FAVOURITE CHOICE"

Syntax: SELECT column 1,

column 2,

FROM table\_name

WHERE column condition
