

Example: Write SQL query to give me only the names of students whose marks are greater than 60%.

students_results		
Student_ID	Name	Marks
101	Rophi	99
102	Mibali	25
103	Thabo	50
104	Lethabo	60

```
SELECT *  
FROM students_results  
WHERE marks > 60
```

Student_ID	Name	Marks
101	Rophi	99

↳ Table is filtered
↳ Table is reduced

Golden Rules:

- Only use one WHERE
- Connect extra rules with **AND** or **OR**
- Texts get single quotes ('GENRE') but **numbers** and **TRUE/FALSE** don't
