

10 June 2026 - SQL Operators

Imagine you have a **giant bucket of toys**.
SQL operators are like rules to a game
that help you pick out **exactly** the toys
you want play with.

1. Comparison Operators (The "looking" operators)

• Help you find toys based on how many you have or what they look like.

Operator	Description
=	Equal
>	Greater than
<	Smaller than
>=	Greater than equal to
<=	Smaller than equal to

2. Arithmetic Operators

Operator	Description
+	Addition
-	Subtraction
*	Multiplication
/	Division

Logical Operators - (The "teamwork" operators)

Operator	Description
AND	Both rules must be true
OR	Only one condition or rule needs to be true
Between	Must be within range
In	Must be contained in the list
Not	Excludes things you don't want
Like	Looks for a pattern

The best friends
The easy-going friend
The sandwich.
You give the robot a short list of favourites
The shopping list
The "Yuck" operator
"I want toys that are NOT cars." You get blocks, puzzles eat but zero cars.
Helps find things that sound or look similar
"Find toys LIKE 'Super!'"
Robot brings Superman
Greenman Superhall
