1. COUNT (The "How Many?" Button)

What is it?

Imagine you have a toy box filled with random toys. **COUNT** is like counting on your fingers **how many** toys are in the box. It doesn't matter if it's a truck, a blocks or a teddy bear - it just counts "1, 2, 3, 4, 5."

When to use it?

Use **COUNT** when you want to know the **total number of things** or rows

- How many customers bought something today
- How many e-mails are in your inbox?
- How many red marbles do we have?

SYNTAX: SELECT COUNT (toy-name)
FROM toy-box;

"Go to the toy box, look at the names of the toys, and tell me the total number of toys you found!"

Grade 10-H

Student_ID	Name	Subj
101	102	Science
Rofhi	Jeff	Commerce
103	104	Commerce
Mark	Elon	Science
105	106	History
Steve	Donald	Commerce

• Counting the number of students in the class using their ID

SELECT COUNT(DISTINCT student_ID)

AS number_of_students

FROM Students

number_of_students
6

- We count something that is uniquely identified like an ID
- We do not count revenue, we SUM() revenue
- We do not sum an ID, we COUNT() an ID
