

22 June 2026 - LIMIT statement

↳ A way of restricting the number of rows you want in your final output.

Imagine you have a big bowl of your favourite chocolate chip cookies. If your mom says "You can have some cookies," you might try to take the entire bowl.

So she gives you a rule **YOU CAN ONLY HAVE 3 COOKIES**. That rule is exactly what LIMIT does in SQL

⇒ A way of restricting the number of rows you want in your final output

SELECT *

FROM table_name

LIMIT

Reduces # of rows you will get in final output.

Employees	ID	name	→ Select *	→ ID	Name
01	Raphi	From employees	101	101	Raphi
02	Zuma	Limit 2	102	102	Zuma
03	Mbali				

23 June 2026 Case statement

↳ A way to build logical conditions

↳ Allows to create a new column based on logical conditions applied on other columns

↳ **CASE STATEMENT** allows us to classify our numerical data into categorical groupings

SYNTAX

SELECT column 1

CASE

WHEN condition 1 then result 1

WHEN condition 2 then result 2

ELSE default_result

END AS column_name

FROM table_name

CASE • States the statement

WHEN • the condition you are testing

THEN • What to output if that condition is true

ELSE • The safety net: What to output if

none of the conditions are met

(Optional, but highly recommended!)

END • Closes the statement
