

Cust_ID	name	amount
1	Rajhi	500

• Only thing that will appear is what appears in **BOTH** tables

↳ Must appear in both tables

↳ There MUST BE A MATCH

PRIMARY KEY!

Every single person in a database needs to prove exactly who they are - without any mix-ups. That's what a **PRIMARY KEY** is for.

It is like an ID number, student number or finger print. for a row in a database table. **UNIQUE IDENTIFIER**

GOLDEN RULES OF PRIMARY KEY

→ Must be 100% unique.

→ It can never be empty

↳ every new item added to the table must be immediately given a primary key.

→ It's an uncopyable tag.

FACT TABLE (The "What happened?")

Fact table is the main event.

- Records every single transaction or action the second it happens.

- Answers questions like "How much?", "How many?", and "When?"

- Because it tracks every sale, fact table grows super fast.

- To save space, it doesn't use words.

It mainly stores numbers (**metrics**) and ID numbers (**keys**)

DIMENSION TABLE (The 'Who, what, where')

Dimension table holds all the descriptive details.

- Tables are smaller & contain actual words & names.

- Give meaning to the boring ID numbers in the fact table
