

25 June 2026 - Left Join

• Priority table A B

• In our final outcome, we need ALL

the rows in the left table.

• You only take the things that match from the right table.

SYNTAX: SELECT column 1,

column 2,

column 3, **left table**

FROM **table 1** AS A

LEFT JOIN **table 2** AS B

ON A.common_column = **right table**

B.common_column.

A LEFT JOIN returns ALL records

from the left table, and only the

matching ~~tables~~ records from the right table.

fall... there is no match the right table

will still keep the left table row, but the right table columns will show **NULL**.

Customers_table		Orders_table	
Cust_id	Cust_name	Order-ID	Amount
1	Raphina	101	500
2	Lerato	102	300
3	Mbali		

Write an SQL query to give me a list of **all the customers** and what they ordered.

```
SELECT cust_id, cust_name, amount, order_id
FROM customers_table AS A
LEFT JOIN orders_table AS B
ON A.cust_id = B.cust_id
```

NULL =

- empty space
- Missing value
- Missing info

↓

Cust_id	Cust_name	amount	order_id
1	Raphina	500	101
2	Lerato	300	102
3	Mbali	NULL	NULL
