

CHECKING FOR DUPLICATES:-

SELECT COUNT(*) AS count

userid

FROM processed_userprofiles

GROUP BY userid

HAVING count.

Null Functions - 13 July 2022

↳ An empty space

↳ Is a blank

↳ A missing value

Imagine you have a toy box. Sometimes, you open the box and there's a toy inside. Other times, the box is empty - nothing at all.

In SQL **NULL** is like that empty box. It doesn't mean "zero" or "nothing exists," it just means **we don't know what's inside** or **there's nothing sorted there right now**.

Sales

Product	Amount
Apple	100
Orange	NULL
Banana	20

100 + NULL + 20

SELECT SUM(AMOUNT) AS revenue
FROM sales
