

DELETE Function ^{removes specific row}

- Used to remove a specific row on our data based on a specific condition

SELECT FROM june_intake.students.profiles;

UPDATE FUNCTION

• Used to update information in a table.

UPDATE june_intake.students.profiles

SET age = 18

WHERE student_id IN (101);

DELETE A COLUMN

ALTER TABLE june_intake.students.profiles

DROP COLUMN registration_DT;

Temporary Tables vs CTEs (Common table expressions)

Temporary Tables

A special toy box you can create to keep around while playing (working in SQL)

• Created explicitly with

CREATE OR REPLACE TEMPORARY TABLE

• Stored physically in the database (but only for the session or connection).

• Can be used multiple times in different queries until the session ends.

• Can have indexes & constraints like normal tables.

• Disappear automatically when your session closes (or you drop them manually).

• It's name must not include a catalog or schema

Example:

CREATE OR REPLACE TEMPORARY TABLE

temp_sales AS

SELECT *

FROM sales

WHERE year = 2026;

SELECT * FROM temp_sales
