

Connecting GitHub

A. On GitHub Databricks

1. Click on right hand corner (Your profile)
2. Settings
3. Linked accounts (2nd last from the bottom)
4. Blue button (Add Git credentials)
5. Link Git Account
6. Authorise

⇒ Link success = We have successfully created a link.

7. Configure in GitHub.

→ Have: "All repositories"

8. Install

⇒ We have linked databricks to GitHub and GitHub to databricks.

B. Creating a repository

1. Go to profile
2. Click repository
3. Type name of repository
4. Make sure visibility is always "public" and README is always on.

C. Copying folder to databricks

Click on "Code"

Copy the link by clicking onto the 2 squares

→ Go to databricks

- Go to "Workspace"

- Create

- Git folder

- Paste the copied link onto the URL

- Click onto "Create Git Folder"

⇒ WE CREATED A REPOSITORY ON GITHUB

AND THEN CLONED IT ONTO DATABRICKS

SO THAT WHATEVER WE DO IN THIS

FOLDER, WHEN WE PUSH IT TO GITHUB,

IT WILL APPEAR IN GITHUB.

Pushing from databricks to GitHub

- Return to databricks

- Click on the "⌂" on the right

- Click Git

- Put "commit message" on lower left

Return to GitHub & refresh.

• Whatever you have in your databricks

must be exactly the same as in GitHub
